

Nature's Way Ambush AB

Foam Concentrate for Class A & B Fires

Instructions

INTRODUCTION: Nature's Way Ambush AB is a patented blend of premium, non-toxic, biodegradable surfactants and natural microbes*. Ambush AB is designed for fast knock down and extinguishment of both Class A and Class B fires with firefighter safety and the environment in mind. Ambush AB is a unique formulation that incorporates the essential characteristics of two separate products, creating an effective dual-purpose concentrate. This high performance blend delivers an optimum balance of consistency, heat resistance, vapor suppression, water penetration, retention, and drainage.

Ambush AB extinguishes flammable/combustible liquids by controlling the release of flammable vapors and cooling sources of ignition in deep-seated fires. Ambush AB enhances the ability of water to penetrate deep into common combustibles, providing fast knock down and resistance to rekindling. Ambush AB provides a stable, long lasting foam blanket on flammable liquids that immediately "heals" itself if disturbed.

Ambush AB also contains live, hydrocarbon-consuming microbes. Although many microbes will be killed due to intense heat, billions more will survive to flourish in the run-off water. Escaping organics, along with the components of Ambush AB itself, are soon transformed by the microbes into harmless by-products. Harmful contaminants are thus prevented from polluting soil and water in the surrounding area. In addition, Ambush AB effectively inhibits organic and inorganic contaminants from polluting the air when administered over the smoke.

Ambush AB is a concentrate having a low, consistent viscosity and is easily administered through all types of conventional foam delivery equipment, including compressed air systems. Ambush AB is no more corrosive to tanks and pump internals than water alone and can be stored in dilution with water in tanks for extended periods.

Application rate is 0.1% to 1.0% for Class A fires and 3% to 6% on Class B fires.

Storage: If product is placed into a bulk tank for long-term storage and use, it is important to make the storage tank as air tight as possible to reduce water evaporation from the product that can cause thickening.

Ambush AB is manufactured using strict quality control measures and designed to meet the requirements of NFPA 298 and UL Standard 162.

WARRANTY: Nature's Way products are manufactured in accordance with strict quality standards, however, due to the many variable and site specific conditions and requirements involved with the Bioremediation process, and the inability of Integra Environmental, Ltd. to control these specific conditions. All implied warranties, including, but not limited to, implied warranties or merchantability and fitness for a particular purpose are hereby disclaimed.

The Nature's Way Line of Products is covered by U.S. Patent number 5,561,059
ALL INGREDIENTS ARE COMPLETELY BIODEGRADABLE
