

Nature's Way Ambush

Foam Concentrate for Class A Fires

Instructions

INTRODUCTION: Nature's Way Ambush is a concentrated blend of premium, non-toxic, biodegradable surfactants. Ambush was developed for fast knock down and extinguishment of Class A fires with firefighter safety and the environment in mind. Ambush greatly enhances the ability of water to penetrate and cool burning materials such as wood, fabrics, paper, and other ordinary combustibles. This provides for faster knockdown than water alone, minimizes rekindling in deep-seated fires, and reduces the amount of water necessary to extinguish. Ambush also effectively inhibits organic and inorganic contaminants from polluting the air when showered onto the smoke.

Ambush is a concentrate having a low, consistent viscosity and is easily administered through all types of conventional foam delivery equipment, including compressed air systems. Ambush is no more corrosive to tanks and pump internals than water alone and can be stored in dilution with water in tanks for extended periods.

Application rate varies between 0.1% and 1.0%, depending on type of equipment and intended purpose.

Storage: If product is placed into a bulk tank for long term storage and use, it is important to make the storage tank as air tight as possible to reduce water evaporation from the product which can cause thickening.

Ambush is manufactured using strict quality control measures and designed to meet the requirements of NFPA 298 and UL Standard 162.

WARRANTY: Nature's Way products are manufactured in accordance with strict quality standards, however, due to the many variable and site specific conditions and requirements involved with the Bioremediation process, and the inability of Integra Environmental, Ltd. to control these specific conditions. All implied warranties, including, but not limited to, implied warranties or merchantability and fitness for a particular purpose are hereby disclaimed.

The Nature's Way Line of Products is covered by U.S. Patent number 5,561,059
ALL INGREDIENTS ARE COMPLETELY BIODEGRADABLE
